

QUALITY LIVESTOCK FEEDS

M4U & M8U

	M4U	M8U
Total Protein	15%	26%
Urea	4%	8%
Monensin	Optional	Optional
Flavopospholipol	Optional	Optional

Flavopospholipol can be included at 10 ppm or Monensin at 100pp but **is restricted** when being used with PCAS certified herd.

Ultralix can make any M4U and M8U products. We can add meal, phosphorus, minerals and medication to any M8U and M4U. The urea in these products can influence the intake of these products but we don't class these products as intake limiting supplements. Cattle get used to the urea taste after a short period of time and consumption can increase making the product uneconomical to feed over a long period of time.

Feeding Rates are 1 to 2kg per head per day

Extra care is needed when supplementing with these products as consumption during the dry season can increase to over 4kg / head /day. While Ultralix carefully manufactures these supplements Ultralix accepts no responsibility for any stock losses due to Urea poisoning. The responsibility lies with the purchaser and users of these supplements.

Ultralix supplements contain Urea and should only be fed at the recommended rates. Make sure all non-targeted animals like horses cannot get access to these supplements. M4U & M8U should only be used when you have adequate forage and water available and not be fed to starving stock or stock that have been deprived from water or roughage.

Ultralix will continue to expand our LiquidLix range as well as offering customers any custom mixed supplements.
