UltraMeal is a molasses based supplement mixed with either grain meal or protein seed meal or a combination of both of these meals. Current UltraMeal mixes can contain up to 10% meal in the supplement but in the future inclusion rates will increase up to 30% meal. UltraMeal can be delivered into your on-farm tank or directly into your trough.

UltraMeal can be fed to all classes of cattle. UltraMeal is designed to be used as a weaner feed, bull / steer / heifer conditioning supplement or fiber replacement supplement for heifers or breeders. Depending on your pasture quality at the time of weaning, we recommend using UltraMeal until the weaners are over 180kg before switching over to Grower. UltraMeal can be feed to cattle at a rate of 0.5% to 2% of the animal bodyweight, your desire or expected outcome will dictate the intake. We recommend to only feed molasses supplement to weaners over 120kg, weaners under 120kg are best fed a milk replacement meal base supplement which is needed to fully develop their ruminant in calves.

Ultralix supplements contain Urea and should only be fed at the recommended rates. Make sure all non-targeted animals like horses cannot get access to these supplements. LiquidLik should only be used when you have adequate forage and water available and not be fed to starving stock or stock that have been deprived from water or roughage. Ultralix will continue to expand our LiquidLik range as well as offering customers any custom mixed supplements.
